ABOUT US

The Pattern Translator is a service that transforms 2D patterns into 3D printable files. 3D printing is a growing industry and it takes slowly its place in the retail fashion industry.

3D printed fashion can create a circular supply chain. A 3D printer can produce without or with less waste material. Waste material can be reused or sustainably drained. This will reduce costs and environmental damage. Post-consumer garments can be recycled what will decrease the total amount of fashion waste.

A 3D pattern can be designed in the right sizes for the consumer. This is an easy way to serve custom fit fashion. The designs can be customized to the customers’ wishes.

Is your company interested in the new technology of 3D printed fashion? Please go to services to see how The Pattern Translator can help you with these new developments.
SERVICES

3D printing is the future for the fashion industry and we will help your company to be ahead of this new technology. The Pattern Translator is the connection between 2D and 3D patterns. We transform your 2D pattern into a 3D file and make it ready to print!

**Garments**
We transform 2D patterns to 3D printable files. *For more information click here!*

**Fabrics**
Our database with different fabric designs is the right fit for your garment. *For more information click here!*

**Trims**
We create unique trims and labels for your brand. *For more information click here!***
GARMENTS

Our 3D designers are specialized in 3D fashion. We transform your 2D patterns into 3D files. These files can be sent directly to a 3D printer. They can be adjusted quick and easy what makes the sampling much faster. The designs can be used for look- and brand books. That will give your customer a good impression of your new collection!

Please contact us and make the first step into the 3D printed fashion industry!
Our database with different kinds of fabric patterns can give your garment the perfect look. We can create a personalized fabric pattern for your fashion brand only.

Please contact us and receive fabric samples of different materials!
TRIMS

Trims are beside functional also the brands’ statement. 3D printed trims make it possible to easily design personal trims. These can be printed locally. Never again a deadstock of trims! Never again a shipment delay! And if you have changed your mind, we can create a new design and recycle old trims to save costs of new material.

Please contact us for a sample of your personal trims!
